

Dust Masks

- Use while working in dusty environments
- Two-strap, NIOSH approved masks provide the most protection
- A tight seal is needed to keep dust or mist from being inhaled. Facial hair can interfere with seal.
- Replace mask when it becomes dirty or difficult to breathe through
- Store slightly used masks in a paper bag
- To put on mask: place under chin and bring the lower strap over your head so it rests at the base of your neck, then bring the top strap over your head and place at the top of your head, above your ears
- Do a "fit test" each time
