

Hearing Protection

Loud noises on the farm may cause hearing loss

Hearing loss is permanent and increases over time. You should use hearing protection to help save your hearing!

- If you have to raise your voice to talk to someone three feet away, you should wear hearing protection.
- Use earmuffs, bands, or earplugs when exposed to loud noises
- Move away from noise sources
- Headphones with radio, CD or mp3 are not the same as hearing protection. They will not protect you from loud noise.
- Warning signs: pain or ringing of the ears, having to yell to be heard, having to turn up radio or TV
